1. Policy on Corporate Social Responsibility

As part of QAI's corporate governance, we are committed to Corporate Social Responsibility (CSR). QAI's policy on CSR is guided by our mission "To conceive and deliver education, training, accreditation and related programs in partnership with stakeholders using an approach of co-design and co-creation". We aim to spread the awareness about importance of quality and patient safety in order to strengthen public and private health system.

2. Policy:

QAI strives to protect and promote public health and safety and the environment.

3. Procedure:

QAI reflects its commitment to CSR policy through:

- A. Awareness campaigns on quality, safety and public health
- B. Developing relevant standards
- C. Resource conservation and waste reduction

A. Awareness campaigns on quality, safety and public health

We organise and participate in campaigns related to quality, safety and public health. We support external organisations (national and international) in their campaigns on these topics. These may be done through presenting in conferences/ seminars as well as organising specific campaigns.

B. Developing relevant standards

We develop standards of relevance to society. Standards can be important tools for driving social agenda. This could set benchmark for the healthcare service providers and have meaningful social impact.

C. Resource conservation and waste reduction

We believe in protecting the environment and make it more resilient. To achieve this, we attempt to conserve natural resources and reduce wastage. For example, we try to make more use of natural light, optimal use of electricity, less use of paper.
